

Experiment No: 1 Flight Reservation System

Aim

To create a simple Flight Reservation System using Zoho Creator and provide it as a Software as a Service (SaaS) application through the cloud.

Software Used

- Zoho Creator
- Google Chrome
- Internet Connection

Algorithm

1. Start.
2. Log in to Zoho Creator.
3. Create a new application.
4. Create the Flight Reservation form.
5. Add the required fields.
6. Save the application.
7. Enter flight booking details.
8. Submit the form.
9. View the stored records.
10. Stop.

Form Fields

- Passenger Name
- Mobile Number
- Email
- Source
- Destination
- Journey Date
- Flight Name
- Number of Passengers
- Payment Method

Output

Flight Reservation System

Flight Reservation.

Result

Thus, the Flight Reservation System was successfully created using Zoho Creator and deployed as a Software as a Service (SaaS) application, and the flight booking details were stored successfully in the cloud.

Experiment No: 2 Property Buying & Rental System

Aim

To create a simple Property Buying & Rental System using Zoho Creator and provide it as a Software as a Service (SaaS) application through the cloud.

Software Used

- Zoho Creator
- Google Chrome
- Internet Connection

Algorithm

1. Start.
2. Log in to Zoho Creator.
3. Create a new application.
4. Create the Property Buying & Rental form.
5. Add the required fields.
6. Save the application.
7. Enter property details.
8. Submit the form.
9. View the stored records.
10. Stop.

Thus, the Property Buying & Rental System was successfully created using Zoho Creator and deployed as a Software as a Service (SaaS) application. The property details were stored successfully in the cloud.

Experiment No: 3 Car Booking Reservation System

Aim

To create a simple Car Booking Reservation System using Zoho Creator and provide it as a Software as a Service (SaaS) application through the cloud.

Software Used

- Zoho Creator
- Google Chrome
- Internet Connection

Algorithm

1. Start.
2. Log in to Zoho Creator.
3. Create a new application.
4. Create the Car Booking Reservation form.
5. Add the required fields.
6. Save the application.
7. Enter car booking details.
8. Submit the form.
9. View the stored records.
10. Stop.

Number of Days Number

Payment Method Dropdown

Output

The screenshot displays the 'Book a Cab' form within the 'Car Booking Reservation System' (CBR) web application. The interface includes a top navigation bar with the system name, a trial expiration notice ('Trial expires in 15 days'), and links for 'Upgrade', 'Edit this application', and 'Help'. A dark sidebar on the left contains the 'Book a Cab' menu item and a 'Bookings' link. The main content area is titled 'Book a Cab' and contains the following form fields:

- Name ***: Split into 'First Name' (containing 'RAM') and 'Last Name' (containing 'K').
- Employee ID ***: A single text field containing '123'.
- Email Id ***: A text field containing 'R123@gmail.com'.
- Mobile Number ***: A field with a country code dropdown set to '+91' and a number field containing '8967876589'.
- Gender ***: Radio buttons for 'Male' (selected) and 'Female'.
- Booking Date ***: A date picker field showing '31-Jul-2026'.
- Travel Date ***: A text field containing '01-Aug-2026'.
- Pickup Time ***: A partially visible text field.

The bottom of the sidebar shows a user profile for 'Lakshna' with a profile icon, a settings gear, and a notification bell.

Result

Thus, the Car Booking Reservation System was successfully created using Zoho Creator and deployed as a Software as a Service (SaaS) application. The car booking details were stored successfully in the cloud.

Experiment No: 4 Library Book Reservation System

Aim

To create a simple Library Book Reservation System using Zoho Creator and provide it as a Software as a Service (SaaS) application through the cloud.

Software Used

- Zoho Creator
- Google Chrome
- Internet Connection

Algorithm

1. Start.
2. Log in to Zoho Creator.
3. Create a new application.
4. Create the Library Book Reservation form.
5. Add the required fields.
6. Save the application.
7. Enter book reservation details.
8. Submit the form.
9. View the stored records.
10. Stop.

Experiment No. 5

Mark Sheet Processing System – SaaS

Aim

To develop a cloud-based Mark Sheet Processing System using Zoho Creator to demonstrate the Software as a Service (SaaS) model. The application enables users to enter student information and marks, automatically calculates the total, average, percentage, and overall performance, and stores the records securely in the cloud.

Software/Tools Required

- Zoho Creator
- Google Chrome / Microsoft Edge
- Zoho Account
- Internet Connection

Algorithm

1. Log in to Zoho Creator.
2. Create a new application named Mark Sheet Processing System.
3. Design a form for entering student details and subject marks.
4. Add the required fields with appropriate data types.
5. Configure formula fields to calculate Total Marks, Average, and Percentage.
6. Determine the student's Overall Performance based on the calculated results.
7. Save the application.
8. Enter sample student records.
9. Verify that the calculated results and student details are stored successfully in the cloud.

Form Fields

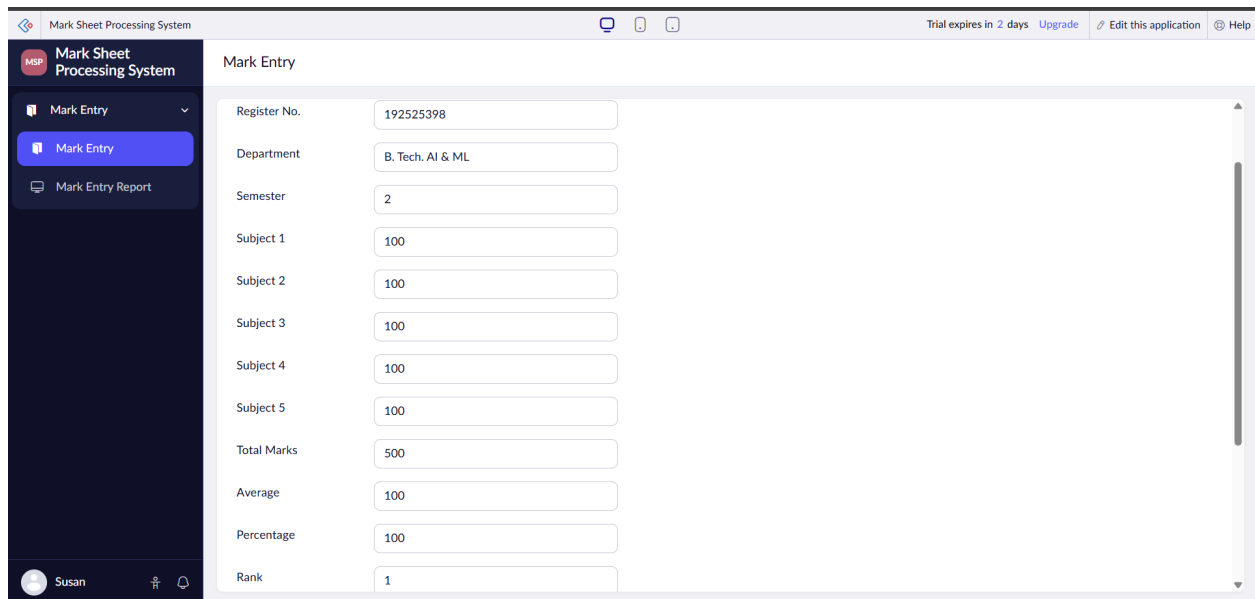

Field Name	Field Type
Student Name	Single Line
Register Number	Single Line

Department	Dropdown

Rank	Number
Overall Performance	Dropdown (Excellent, Very Good, Good, Average, Fail)

Remarks

Multi Line

Output

The screenshot displays the 'Mark Sheet Processing System' web application. The interface includes a top navigation bar with the system name, user profile, and trial status. A left sidebar contains navigation options: 'Mark Entry' (selected), 'Mark Entry Report', and a user profile section for 'Susan'. The main content area is titled 'Mark Entry' and contains a form with the following fields and values:

Field	Value
Register No.	192525398
Department	B. Tech. AI & ML
Semester	2
Subject 1	100
Subject 2	100
Subject 3	100
Subject 4	100
Subject 5	100
Total Marks	500
Average	100
Percentage	100
Rank	1

Result

Thus, the Mark Sheet Processing System was successfully developed using Zoho Creator. The application automatically calculates academic results and securely stores student records in the cloud, effectively demonstrating the Software as a Service (SaaS) model.

Experiment No: 6 Product Selling System

Aim

To create a simple Product Selling System using Zoho Creator and provide it as a Software as a Service (SaaS) application through the cloud.

Software Used

- Zoho Creator
- Google Chrome
- Internet Connection

Algorithm

1. Start.
2. Log in to Zoho Creator.
3. Create a new application.
4. Create the Product Selling form.
5. Add the required fields.
6. Save the application.
7. Enter product order details.
8. Submit the form.
9. View the stored records.
10. Stop.

Thus, the Product Selling System was successfully created using Zoho Creator and deployed as a Software as a Service (SaaS) application. The product order details were stored successfully in the cloud.

Experiment No. 7

Students Attendance System – SaaS

Aim

To develop a cloud-based Students Attendance System using Zoho Creator to demonstrate the Software as a Service (SaaS) model. The application enables faculty members to record student attendance, calculate attendance percentage, manage On Duty (OD) requests, and securely store attendance records in the cloud.

Software/Tools Required

- Zoho Creator
- Google Chrome / Microsoft Edge
- Zoho Account
- Internet Connection

Algorithm

1. Log in to Zoho Creator.
2. Create a new application named Students Attendance System.
3. Design a student attendance management form.
4. Add the required student and attendance-related fields with appropriate data types.
5. Configure formula fields to calculate the Attendance Percentage automatically.
6. Determine the Course Attendance Status based on the attendance percentage.
7. Save the application.
8. Enter sample student attendance records.
9. Verify that the attendance details are stored and displayed successfully in the cloud database.

Form Fields

Field Name	Field Type
Student Name	Single Line
Register Number	Single Line

Course	Dropdown
Department	Dropdown
Semester	Number
Total Classes Conducted	Number
Classes Attended (Present)	Number
Classes Missed (Absent)	Number
Attendance Percentage	Formula (Decimal)
Course Attendance Status	Dropdown (Eligible, Not Eligible)
OD Request	Checkbox
Grade	Dropdown
Faculty Name	Single Line
Remarks	Multi Line

Output

The screenshot displays the 'Students Attendance System' application interface. The top header bar includes the application name, navigation icons, and links for 'Trial expires in 2 days', 'Upgrade', 'Edit this application', and 'Help'. The left sidebar contains the application logo and three menu items: 'attendance management', 'attendance management', and 'attendance management Report'. The main content area is titled 'attendance management' and contains a form with the following fields:

Field	Value
Student name (First Name)	Susan
Student name (Last Name)	Nal
Register No.	192525398
Course	Cloud Computing
Department	B. Tech. AI & ML
Semester	2
Total Classes Conducted	14
Classes Attended (Present)	13
Classes Missed (Absent)	1
Attendance Percentage	92.86
Course Attendance Status	Eligible
OD Request	☒ Choice 1

Result

Thus, the Students Attendance System was successfully developed using Zoho Creator. The application automatically calculates attendance percentage, manages attendance records and OD requests, and securely stores student information in the cloud, effectively demonstrating the Software as a Service (SaaS) model.

Experiment No. 8

Student Counselling System – SaaS

Aim

To develop a cloud-based Student Counselling System using Zoho Creator to demonstrate the Software as a Service (SaaS) model. The application enables students to register for counselling by providing their personal, academic, and career-related details, while securely storing the information in the cloud for counsellors to access and manage.

Software/Tools Required

- Zoho Creator
- Google Chrome / Microsoft Edge
- Zoho Account
- **Internet Connection**

Algorithm

1. Log in to Zoho Creator.
2. Create a new application named Student Counselling System.
3. Design a student counselling registration form.
4. Add the required personal, academic, and counselling-related fields with appropriate data types.
5. Configure validation rules and dropdown options where necessary.
6. Save the application.
7. Enter sample student counselling details.
8. Verify that the submitted information is stored successfully in the cloud database.
9. View and manage the counselling records.
10. Stop.

Form Fields

Field Name	Field Type

Counsellor Name Single Line

Remarks Multi Line

Output

The screenshot displays the 'Student Counselling System' registration form. The interface includes a top navigation bar with the system name, user profile, and trial status. A left sidebar contains navigation links for registration, reports, and user profile. The main form area is titled 'student counselling registration' and contains the following fields:

- Student name:** Split into 'First Name' (Susan) and 'Last Name' (Nal).
- Register No.:** 192525398
- Age:** 18
- Gender:** Female (dropdown menu)
- Address:** 3/4, Madha st., KKC, Thiruvallur -631204
- Phone Number:** +91 812345689
- Email:** susanchinna56@gmail.com
- Subject Studied:** Tamil, English, Maths, Biology, Physics, Chemistry

Result

Thus, the Student Counselling System was successfully developed using Zoho Creator. The application securely stores student counselling information in the cloud and enables efficient management of counselling records, thereby demonstrating the Software as a Service (SaaS) model.

Experiment No. 9

Hospital Information System for SIMATS Hospital – SaaS

Aim

To develop a cloud-based Hospital Information System for SIMATS Hospital using Zoho Creator to demonstrate the Software as a Service (SaaS) model. The application enables hospital staff to register patients, maintain medical records, and securely store patient information in the cloud for efficient access and management.

Software/Tools Required

- Zoho Creator
- Google Chrome / Microsoft Edge
- Zoho Account
- Internet Connection

Algorithm

1. Log in to Zoho Creator.
2. Create a new application named Hospital Information System.
3. Design a patient registration form.
4. Add the required patient, attender, and medical information fields with appropriate data types.
5. Configure validation rules and dropdown options where necessary.
6. Save the application.
7. Enter sample patient records.
8. Verify that the patient information is stored successfully in the cloud database.
9. View and manage the patient records.
10. Stop.

Form Fields

Output

The screenshot displays a web application titled "Hospital Information System for SIMATS Hospital". The interface includes a dark sidebar on the left with a menu containing "patient registration" (selected), "patient registration", and "patient registration Report". The main content area is titled "patient registration" and contains a form with the following fields: "Patient Name" (split into "First Name" with value "Mala" and "Last Name" with an empty field), "Patient ID" (value "123-456-DA"), "Age" (value "23"), "Gender" (dropdown menu showing "Female"), "Address" (value "2/4 , anna st. , Anna nagar , Chennai"), "Phone Number" (country code "+91" and number "8123456789"), "Email" (value "susanchinna56@gmail.com"), "Attender Name" (value "Kala"), "Attender phone no." (country code "+91" and number "9123457890"), and "Doctor Name" (value "Dr. Bala"). The top right of the application shows a trial expiration notice "Trial expires in 2 days" and links for "Upgrade", "Edit this application", and "Help". The bottom left of the sidebar shows a user profile for "Susan".

Result

Thus, the Hospital Information System for SIMATS Hospital was successfully developed using Zoho Creator. The application securely manages patient registration and medical records in the cloud, thereby demonstrating the Software as a Service (SaaS) model.

Experiment No. 10

Student Information System (C Program Execution) – SaaS

Aim

To develop a cloud-based Student Information System using Zoho Creator to demonstrate the Software as a Service (SaaS) model. The application stores student personal and academic information securely in the cloud, which can be used as input for displaying student information through a C program.

Software/Tools Required

- Zoho Creator
- Google Chrome / Microsoft Edge
- Zoho Account
- Internet Connection
- GCC Compiler / Online C Compiler

Algorithm

1. Log in to Zoho Creator.
2. Create a new application named Student Information System.
3. Design a student information form.
4. Add the required personal and academic fields with appropriate data types.
5. Configure validation rules for fields such as email address, phone number, and register number.
6. Save the application.
7. Enter sample student records.
8. Verify that the student information is stored successfully in the cloud database.
9. Use the stored student details as input to display information through a C program.
10. Stop.

Form Fields

Field Name	Field Type
Student Name	Single Line

Semester Mark Sheet File Upload

Remarks Multi Line

Output

The screenshot displays the 'Student Information System' web application. On the left is a dark sidebar with a menu containing 'student information' (selected), 'student information Report', and a user profile for 'Susan'. The main content area, titled 'student information', contains a form with the following fields:

Field	Value
Student name (First Name)	Susan
Student name (Last Name)	Nal
Register No.	192525398
Age	18
Gender	Female
Address	3/4, Madha st., Thiruvallur - 631204
Phone Number	+91 8123456789
Email	susanchinna56@gmail.com
Department	B. Tech. AI & ML
Course	DAA
Semester	2

Result

Thus, the Student Information System was successfully developed using Zoho Creator. The application securely stores student information in the cloud and provides the required data for C program execution, thereby demonstrating the Software as a Service (SaaS) model.

Experiment No. 11

Online Super Market System – SaaS

Aim

To develop a cloud-based Online Super Market System using Zoho Creator to demonstrate the Software as a Service (SaaS) model. The application enables customers to place online grocery orders, categorize products, calculate the total bill automatically, and securely store customer and order details in the cloud.

Software/Tools Required

- Zoho Creator
- Google Chrome / Microsoft Edge
- Zoho Account
- Internet Connection

Algorithm

1. Log in to Zoho Creator.
2. Create a new application named Online Super Market System.
3. Design an online shopping order form.
4. Add the required customer, product, and order-related fields with appropriate data types.
5. Configure dropdown options for item categories and payment methods.
6. Create a formula field to calculate the Total Amount based on quantity and unit price.
7. Save the application.
8. Enter sample customer order details.
9. Verify that the order details are stored successfully in the cloud database.
10. View and manage the customer orders.

Form Fields

Field Name	Field Type
Customer Name	Single Line

Customer ID	Single Line
Address	Multi Line
Phone Number	Phone
Email Address	Email
Item Category	Dropdown (Fruits, Vegetables, Dairy, Beverages, Snacks, Grocery, Personal Care, Others)
Item Name	Single Line

Unit Price	Currency
Total Amount	Formula (Currency)
Payment Method	Dropdown (Cash on Delivery, UPI, Credit/Debit Card, Net Banking)
Order Date	Date

Delivery Address Multi Line

Order Status Dropdown (Pending, Confirmed, Shipped, Delivered, Cancelled)

Remarks Multi Line

Output

The screenshot displays the 'online shopping order' form within the 'Online Super Market System' web application. The interface includes a dark sidebar with navigation options: 'online shopping order' (selected), 'online shopping order Report', and a user profile for 'Susan'. The main form area contains the following fields:

- Customer Name:** Split into 'First Name' (Susan) and 'Last Name' (susan).
- Customer ID:** SSSU-123
- Address:** 3/4, Madha st, KKC, Thiruvallur -631204
- Phone Number:** +91 8123456789
- Email:** susanchinna56@gmail.com
- Item Category:** Fruits
- Item Name:** Apple
- Quantity:** 20
- Unit Price:** 20
- Total Amount:** 400

The top of the browser window shows the application title 'Online Super Market System' and a trial status 'Trial expires in 2 days' with links for 'Upgrade', 'Edit this application', and 'Help'.

Result

Thus, the Online Super Market System was successfully developed using Zoho Creator. The application efficiently manages online grocery orders, calculates the total bill automatically, and securely stores customer and order information in the cloud, thereby demonstrating the Software as a Service (SaaS) model.
